Aerofleet Training+

Advanced training services – adding value to your professional training program

Training is vital to the success of any business, but the time and costs required to stay current and continually refresh programming can be overwhelming. As an AkzoNobel partner, you have most likely received support from our expert Technical Services team at the point of delivery. Our commitment being the seamless integration of our coatings into your processes.

Based on the feedback we've received over the years, we have decided to take our world-class delivery support and expand it to create a suite of dedicated training services. These have been designed to support customers at every level and address individual business needs. Most importantly it is designed to be accessible when you need it and as often as you need it, either on-site or remotely.

Based on the industry expertise and experience of our Technical Services team, Aerofleet Training+ is designed for any aviation organization that sees quality and talent development as an integral part of their reputation. We have designed our approach to remove non-value added costs, save time, and save resources. By bringing even greater rigour and structure to the support we can provide, you can be sure that we will be there when you need us.

Services to address different needs

Our Aerofleet Training+ services are focused on three main areas:

1

End to End Paint Process Training

Designed to encompass the entire paint process from start to finish.

Training that starts with the importance of surface preparation of the substrate, includes the cleaning and tacking processes, and finishes with coating application and final detailing. Also included is instruction and discussion on process automation, rotary bell application and other automated spray operations. Throughout the End to End process, applicators will be trained in identifying potential quality issues at each step and how to ensure a consistent finish and avoid common problems before they occur.

2

High-Frequency Training and Support

This is for customers who need or want more frequent, and regular training beyond our typical product delivery support.

If your training needs are monthly, quarterly, annually, or on demand, this option is developed in partnership with the Technical Service team to design and deliver a training program specifically for your facility and applicators. The goal is to deliver the flexibility you need to meet staff training needs quickly and efficiently.

With the current shortage in labor and increasing difficulty in finding and retaining reliable applicators, regular training helps to onboard new painters and upskill experienced painters quickly and effectively.

- Great for operations running multiple shifts
- Great for operations training multiple new applicators

3

Virtual Reality Paint Training

Conducted at your site using a mobile VR classroom, the VR paint booths mimic your production facility and painting equipment.

By using technology, we are shifting the “traditional” training paradigm from art to science. The technology measures and records the performance of the applicator and provides real-time feedback.

In addition to saving costs associated with products, training parts, consumables (sandpaper, towels, respirators or cartridges, disposable coveralls, etc) there are no VOCs to track, no waste to dispose of and no limit to how many times you can “paint” the same part.

Aerospace Business Solutions

Aerofleet Training+ is part of our Aerospace Business Solutions business, which includes our new Aerofleet Coatings Management services. For more information on training and the other value-added services we provide, contact:
